Research interests: high-performance radio transmitting devices, digital broadcasting in the LF, MF and HF bands, antenna technology. A technology has been developed for creating a network of state terrestrial digital broadcasting of the DRM standard for the Russian Federation, based on the proposed method of large-cluster zones of single-frequency synchronous broadcasting in the LF range. The technical foundations of the methodology for frequency-territorial planning of digital broadcasting networks of the DRM standard for the LF and MF bands have been developed. A method is proposed for expanding the matching band of transmitting broadcast antenna systems in the LF and MF ranges. Author of over 70 scientific papers, 5 certificates for inventions and 14 international patents.
